

TECTORIUS® VIBRA-GRIP™

Anti-Vibration Compound & Removal Preventative

DESCRIPTION:

Vibra-Grip is a powerful vibration-damping coating with special grip producing particles, for use on fasteners and other assembly components. It prevents movement and backing out of screws, nails, nuts, bolts, rivets, pins and parts of all types. Non fastener uses include enhanced and renewed stabilization of spline assemblies and flanges. The product's unique resiliency allows for removal, readjustment and reinstallation of components.

METHOD OF USE:

Mix thoroughly before use. Apply Vibra-Grip liberally to the area to be engaged in assembly; allow to dry. The component can then be installed or stored indefinitely for later use, allowing for bulk or assembly line coating in large quantities. When applied, Vibra-Grip dries within seconds leaving coated parts ready for assembly in just a few minutes. Part degreasing is not required prior to application.

PRODUCT FEATURES:

- » **Exceptional Shelf Life:** Parts coated with Vibra-Grip can be stored indefinitely before use.
- » **Versatile:** Vibra-Grip can be used on components of all types, not only fasteners. Rivets, pins, shafts, collars, springs, knobs, terminals, etc. can benefit when coated with Vibra-Grip.
- » **Surface Insensitive:** Unlike most anaerobic adhesives, Vibra-Grip adheres to both ferrous and nonferrous metals and to most screw types including wood, plastic and plated.
- » **Provides a Reliable Stay in Place character:** Vibra-Grip holds parts in place under a wide range of conditions; even during extreme vibration.
- » **Low Cost:** Vibra-Grip is priced far less than anaerobic adhesives and competing products.
